

Introducing Japanese companies with excellent technology and products to the world

Welltime Corporation was founded with the goal of helping to spread Japan's excellent technology and products to the world. We will cooperate with domestic and overseas partners to support the global expansion of outstanding Japanese products that have not yet been commercialized, as well as technologies developed through collaboration between Japan and overseas. To achieve this, we aim to achieve a breakthrough in commercialization by working with teams of experts in various fields, including those in business transformation and business start-up.

In particular, we will focus on supporting companies and organizations taking on the challenge of solving global issues (grand challenges) in fields such as bio/healthcare, energy, agriculture and IT.

Business Area

1. Business planning, research and planning for market development, and business start-up support
2. Consulting in fields such as bio/healthcare, energy, agriculture and IT
3. Consulting service related to IT, financial and management etc.

We support various attempts to challenge conventional wisdom and build new systems, known as disruptive innovation.

- ① Support for operation of the **Cell Sheet Tissue Engineering Regenerative Medicine** Organization
(Support for the realization of the **regenerative medicine revolution**)
 - ② Support for Japanese drug discovery ventures
(Development of **anticancer drugs using viruses as vectors**)
 - ③ Support for **standalone power generator business using magnetic motors**
 - ④ Support for commercialization of **carbon nanotube filament biosensors**
(Remote treatment use)
 - ⑤ **Support for development of animal medicines originating from Japan**
(**Development of drug for cat feline kidney disease**)
 - ⑥ Support for popularization of **magnetic organic matter decomposition equipment**(**Energy saving, CO₂ reduction, Residue minimization treatment**)
 - ⑦ **Support for the popularization of new Stirling engines**
 - ⑧ Support for research and popularization of **antioxidant plant minerals**
(**Immunity strengthening, food ingredient transformation, longevity**)
 - ⑨ **Support for energy-saving/low-cost multi-purpose heating and cooling equipment** using radiant heat (Use of heat pipe technology)
 - ⑩ Support for popularization of multi-function molecular cookers
(**Kitchen revolution, support for food tech**)
- Support for research on anti-aging Pilates
 - Support for research on innovative golf swings
(supporting the spread of the M-Break/Kouzuma Method)
